

SCOAP Hospital Participation & Performance: Publically released data, by hospital
Quarter 1, 2009 through Quarter 4, 2009

Metrics Key: See SCOAP website for detailed explanations

Notes:

- 1 Use of advanced testing (ultrasound or CT scan) among women, ages 18 - 50, undergoing appendectomy - prevents misdiagnosis
- 2 Accuracy of advanced testing (ultrasound or CT scan) for patients undergoing appendectomy - prevents misdiagnosis
- 3 Tests, while in the OR, for leaks in the new stomach connections among gastric bypass patients - allows for repair before adverse impact on patients
- 4 Blood sugar testing among gastric bypass patients with diabetes - allows for appropriate management of diabetes and infection prevention
- 5 Insulin treatment in the OR for gastric bypass patients with high blood sugar - indicates timely management of elevated blood sugar
- 6 Heart protective medications (Beta blockers) are appropriately continued after gastric bypass surgery - prevents heart attacks after surgery
- 7 Blood sugar testing among colon or rectal surgery patients with diabetes - allows for appropriate management of diabetes and infection prevention
- 8 Insulin treatment in the OR for colon or rectal surgery patients with high blood sugar - indicates timely management of elevated blood sugar
- 9 Heart protective medications (Beta blockers) are appropriately continued after colon or rectal surgery - prevents heart attacks after surgery
- 10 Body temperature is maintained appropriately during surgery - prevents infection
- 11 Use of advanced pain control methods among eligible cases - improves patient comfort
- 12 Red blood cell transfusion avoided during colon or rectal procedures
- 13 Tests, while in the OR, for leaks in the new GI tract connections among patients having colon or rectal procedures - allows for repair before adverse impact on patients
- 14 Albumin testing prior to surgery to assess nutritional status of (non-cancer) patients having elective colon or rectal procedures
- 15 Avoiding elective colon or rectal operations in (non-cancer) patients with poor nutrition

¹Pediatric cases not included in the reported metrics

²Only elective colon/rectal cases are included

Symbols Key: (% of cases)

> 75%
 50 - 75%
 < 50%
 No data available
 Not releasing data
 n/a Too few cases to accurately evaluate (1-4)
